Hy-Tek INTRALOGISTICS

Operational Readiness
SELF CHECK

Is your team prepared for success on day one?

Too often, automation projects fall short not because of the technology, but because operations weren't truly ready. This pre-automation self-checklist is designed to help you evaluate whether your facility, processes, and people are set up to fully realize the ROI of your automation investment.

- ☐ Have your SOPs been updated to reflect post-automation workflows?

- ☐ Have you planned for testing of end-to-end scenarios, including edge cases and disruptions?

- ☐ Are operators, supervisors, and leadership aligned on what changes and why?

- ☐ Is there a formal go-live support plan in place?

- ☐ Do you have clearly defined metrics for success across all impacted teams?

- ☐ Is an operational sequencing plan and inventory migration plan in place?

- ☐ Do you have a clear idea of how inventory will be slotted between different storage media in the new environment?

- ☐ Have you developed an end-to-end process design and flow?

- ☐ Is there a ramp-up plan?

- ☐ Is a post-go-live evaluation process in place?

- ☐ Has a comprehensive training plan, including maintenance and systems, been developed?

Unsure where to start, or where the gaps might be?
